

CYBERSECURITY PROGRAM OF THE FUTURE:

What Will "Bench Strength" Look Like?

TODAY'S CHALLENGES

Humans are a Risk Factor

Lack of employee awareness & vigilance

62%

of all organizations had not increased security training in 2015¹

Vanishing perimeter

(BYOD, Cloud, IoT, remote workforce)

Security engaged too late in strategic initiatives

Inconsistent application of security policies across business functions

66%

of security staff do not believe their organization's senior leadership views security as a strategic priority²

Security Pros are Limited & Expensive

2022

By 2022, there will be

1.8 million

unfilled cybersecurity-related positions³

67%

of IT security professionals strongly agree they need more experienced, skilled practitioners⁴

75%

of security professionals have been approached by a hiring organization or headhunter about IT job opportunities in the past year⁵

WHAT SUCCESS LOOKS LIKE

Humans are a Resilience Factor

Security and business leaders prioritize employee awareness and business-wide accountability for security

CISOs are **business leaders**, not only **security leaders**

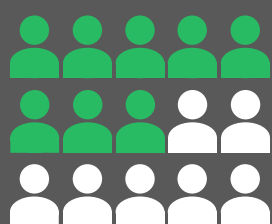

Security is brought to the table early in transformative initiatives such as Cloud, IoT

Bench Strength Gets a Boost

Cybersecurity relies on **how** people work as much as on **how many** people work

AI + HI

Combine the power of human analysis and expertise with the processing power and speed of artificial intelligence

For example, Secureworks processes up to

240 billion events/day

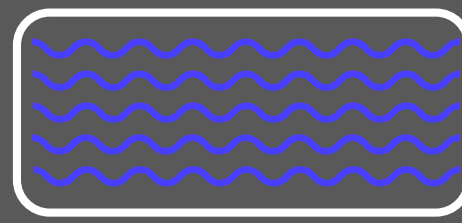

99%

of events resolved by Secureworks Counter Threat Platform™

Cut through the noise

If events we processed for a client filled an **Olympic-sized swimming pool**,

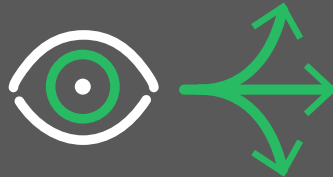

then they would only need to touch what fit in

less than a cup of water

Orchestration:

Increased visibility on premise, off premise and at the endpoint

Leverage the network effect of shared global threat intelligence

PREVENT

DETECT

RESPOND
