

## DATA SHEET

# Context-Driven Vulnerability Detection and Prioritization

See Everything, Prioritize Risk & Remediate Faster.

## The challenge

When it comes to network security in today's environment, certain facts are indisputable:

- All corporate networks are operating with hundreds or even thousands of open vulnerabilities
- Patching any single vulnerability can be time-consuming, and can disrupt otherwise-functioning systems
- Patching all vulnerabilities is unrealistic

## The solution

Fortunately, another fact is also indisputable:

### All vulnerabilities are not created equal

Many tools can provide an endless list of vulnerabilities. You need one that can tell you which ones to address, and in which order.

## That's where Secureworks comes in

### Context is King

Other vulnerability prioritization tools base their scores on the Common Vulnerability Scoring System (CVSS). For Secureworks, the CVSS score is only the beginning. Secureworks develops its vulnerability risk score by applying an AI engine to 40+ different factors, half external to the enterprise (e.g., which vulnerabilities other Secureworks users are prioritizing), and half internal (e.g., is the IT asset connected to the network or multiple devices on its sub-net). So, you don't just get a "high/medium/low" designation based on a generic, context-blind CVSS score, you get a numbered, immediately actionable list.

### About Secureworks

Secureworks® (NASDAQ: SCWX) is a global cybersecurity leader that protects customer progress with Secureworks® Taegis™, a cloud-native security analytics platform built on 20+ years of real-world threat intelligence and research, improving customers' ability to detect advanced threats, streamline and collaborate on investigations, and automate the right actions.
